## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12-2-05 has been entered.

### ***Response to Arguments***

2. Applicant's arguments with respect to claim 17 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 17-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeLine US 6,420,975 B1 in view of Jones US 6,363,254 B1.

As to claim 17, DeLine discloses the method of operating an information system, comprising: providing an information system in a vehicle (digital sound processing system); inputting data into the information system (see col. 1, lines 20-27; col. 2, line 47 – col. 3, line 12). DeLine does not specifically disclose transmitting a message from the information system to a given vehicle destination, wherein the message is: indicative of progress of the vehicle; and based on the data. In an analogous art, Jones discloses transmitting a message from the information system to a given vehicle destination, wherein the message is: indicative of progress of the vehicle; and based on the data (see col. 1, lines 35-42), thereby informing the vehicle status at the destination. Therefore, it would have been obvious to one of the ordinary skill in the art at the time of invention to combine these teachings to indicate the vehicle expected arrival (see col. 1, lines 39-40).

As to claims 18 and 20, DeLine discloses the method further comprising: providing a mobile telephone (peripheral device), inputting a vocal command into the information system, automatically dialing the mobile telephone in response to inputting the vocal command (see col. 37, line 19 – col. 38, line 23).

As to claim 19, DeLine discloses the method further comprising: providing a mobile data processing/storage device (see fig. 16, item 1060), storing data on the mobile data processing/storage device (see col. 9, line 56 – col. 10, line 9); inputting a vocal command into the information system, presenting data from the mobile data

processing/storage device in response to the vocal command (see col. 9, lines 34-55; col. 10, line 54 –col. 11, line 27).

As to claim 21, DeLine discloses the method further comprising presenting address information (see col. 3, lines 35-48).

As to claim 22, DeLine discloses the method wherein the data is indicative of the weather (see col. 41, lines 6-19).
